

# **Internal Data Retention Policy (Fixture)**

This document is a fictional regulation-style fixture used only for this project's automated tests and describes no real organization, system, or policy.

## **Article 1. Purpose**

This fictional policy sets out how the organization retains and disposes of operational data such as log files, support tickets, and configuration backups. It exists only as a test fixture for this project and describes no real organization or process.

## **Article 2. Scope**

This policy applies to log files, support tickets, and configuration backups generated by internal systems, regardless of which team owns the system. It does not apply to source code repositories or to data held by external processors.

## **Article 3. Retention Periods**

Log files are retained for ninety days from the date they are written. Support tickets are retained for two years after closure. Configuration backups are retained for one year from the date of the backup.

## **Article 4. Disposal**

Data past its retention period is deleted within thirty days by an automated job that runs on a nightly schedule. Deletion is logged with the record identifier and the deletion date, but never with the record's content.

## **Article 5. Exceptions**

Data subject to an active legal hold is retained until the hold is lifted, regardless of the periods set out in Article 3, and the hold itself is recorded together with the name of the requesting team.

## **Article 6. Review**

This policy is reviewed once every year by the team responsible for data governance. Each review records the reviewer, the review date, and a summary of any period that changed.
